8. Progress of M/136 rev2 (Products in contact with drinking water)	50
a) Test methods	51
b) Harmonised product standards	51

1. Executive Summary

The Construction Sector is the biggest single area of work in CEN with around 3000 work items, both product standards and test methods. Of these about 600 product standards will be harmonised under the Construction Products Directive (89/106/EEC) and Construction Products Regulation (EU 305/2011) and another 1500 supporting standards are required to allow for the CE marking of the relevant construction products.

Considering the requirements of the Construction Products Regulation (CPR), a number of harmonised product standards will need amendments to allow for the establishment of DoP (Declaration of Performance) as from the 1st July 2013.

The following table shows the general progress since the last report to SCC. The figures shown in the table do not cover the amendments and the corrigenda to the harmonised product standards.

STAGES	SITUATION 2012	SITUATION 2013
	December (SCC)	March (SCC)
Total number of drafts/standards concerned	515	504
Total number of standards approved	424	439
ENs made available to CEN Members	424	439
ENs cited in OJEU	413	421
ENs not yet available	5	6
Drafts having failed FV/UAP	2	2
Drafts undergoing FV/UAP	14	4
Draft received in CCMC for FV/UAP	16	7
Drafts having passed the CEN Enquiry stage and progressing at the level of CEN/TCs for FV	14	14
Drafts undergoing CEN Enquiry	4	11
Drafts in CCMC for CEN Enquiry	9	1
Drafts under preparation at TC level for CEN Enquiry	27	20

CEN has finalized so far 439 standards out of a current total of +/- 504 candidate harmonised product standards, of which 421 have been cited in the OJEU at the time of the drafting of the current report. A number of candidate harmonised and already harmonised standards are the subject of queries, outstanding amendments to work programmes etc.

Moreover, new mandates (ETICS, anchors, gypsum products, etc.) and revised CEN/TC work programmes covering new work items, specially those linked to mandate M/136, which is being revised, covering products in contact with water intended for human consumption, should continue to increase the total number of candidate harmonised product standards to reach the expected total number of 600.

2. New references candidate for citation

The following Standards have been finalised and have or will be proposed to be included in the new consolidated list of the OJEU.

Standard	Title of the harmonised standard	Date of availability
EN 1013:2012	Light transmitting single skin profiled plastics sheets for internal and external roofs, walls and ceilings – Requirements and test methods	12.12.2012
EN 13282-1:2012	Hydraulic road binders - Part 1: Rapid hardening hydraulic road binders - Composition, specifications and conformity criteria	06.03.2013
EN 15732:2012	Light weight fill and thermal insulation products for civil engineering applications (CEA) - Expanded clay lightweight aggregate products (LWA)	24.10.2012
EN 16069:2012	Thermal insulation products for buildings - Factory made products of polyethylene foam (PEF) - Specification	28.11.2012

3. List of mandates and CEN/TCs working under CPD/CPR

Since February 1995, CEN has received about 33 mandates (+ relevant amendments) under the CPD, covering about 30 families of products and another 2 mandates covering reaction and resistance to fire, with amendments, and 1 covering the development of test methods for dangerous substances.

Following the mandates received under the Construction Products Directive, 74 CEN and ECISS Technical Committees are drafting/amending candidate harmonised product standards and the relevant supporting standards. Besides these, CEN/TC 38 "Durability of wood and derived materials", CEN/TC 89 "Thermal performance of buildings and building components", CEN/TC 126 "Acoustic properties of building elements and of buildings", CEN/TC 127 "Fire safety in buildings" and CEN/TC 351 "Construction products-assessment of release of dangerous substances" are involved with the elaboration of the relevant horizontal test methods and CEN/TC 339 "Determination of the parameters of slip".

The work of CEN/TC 350 "Sustainability of construction works" will be used when mandates to cover the Basic Requirement for Construction Work number 7 (Sustainable use of natural resources) will be issued.

The following table shows the list of mandates received and the Technical Committees preparing standards for the specific mandate.

a) Product Mandates

MANDATE	PRODUCTS COVERED	TCs INVOLVED
M/100	Precast concrete products	<ul style="list-style-type: none"> CEN/TC 229 'Precast concrete products' CEN/TC 177 'Prefabricated reinforced components of autoclaved aerated concrete or lightweight aggregate concrete with open structure'

4. Harmonised product standards

CEN has made available candidate harmonised product standards covering products from the major construction product families. The table below gives the list of harmonised product standards already cited in the OJEU and candidate harmonised under development.

Additional information on the development of European Standards under CPD/CPR is available in the [CEN website](#).

MANDATE	TITLE	FINALIZED/HARMONISED PRODUCT STANDARDS	OUTSTANDING STANDARDS
M/100	Precast concrete products	<p><u>1. Already cited</u></p> <ul style="list-style-type: none"> ▪ Elements for fences (EN 12839); ▪ Prefabricated reinforced components of lightweight aggregate concrete (EN 1520); ▪ Special roof elements (EN 13693); ▪ Hollow core slabs (EN 1168); ▪ Precast concrete garages (EN 13978-1); ▪ Floor plates for floor systems (EN 13747); ▪ Linear structural elements (EN 13225); ▪ Ribbed floor elements (EN 13224); ▪ Foundation piles (EN 12794); ▪ Masts and poles (EN 12843); ▪ Precast concrete products – Box culverts (EN 14844); ▪ Precast concrete products – Foundation elements (EN 14991); ▪ Precast concrete products – Wall elements (EN 14992) ▪ Beam-and-block floor systems – Part 1: Beams (EN 15037-1); ▪ Beam-and-block floor systems – Part 4: Polystyrene blocks (EN 15037-4); ▪ Precast concrete products – Bridge elements (EN 15050); ▪ Precast concrete products – Stairs (EN 14843); ▪ Floor slats for livestock (EN 12737); ▪ Retaining wall elements (EN 15258) ▪ Normal weight and lightweight concrete shuttering blocks – Product properties and performance (EN 	<ul style="list-style-type: none"> ▪ Beam-and-block floor systems – Part 5: Lightweight blocks (prEN 15037-5) <i>it will be in the next batch for citation</i>

00351018		Construction products - Assessment of release of dangerous substances - Analysis of inorganic substances in digests and eluates - Part 1: Analysis by Inductive Coupled Plasma - Optical Emission Spectrometry (ICP-OES)	Under Drafting	2014-05
00351019		Construction products - Assessment of release of dangerous substances - Analysis of inorganic substances in digests and eluates - Part 2: Analysis by Inductive Coupled Plasma - Mass Spectrometry (ICP-MS)	Under Drafting	2014-05

8. Progress of M/136 rev2 (Products in contact with drinking water)

The first Mandate M136 was issued to CEN in 2001. This Mandate was drawn up on the assumption that a single European regulatory assessment scheme would be drawn up for the acceptance of products in contact with drinking water – the EAS. A programme of work on test methods was prepared by TC164/WG3 and accepted by the Commission. No work on product standards was possible until more information became available on the EAS. During 2005/6 the Commission withdrew its support for the EAS, and stated that the work would proceed purely under the

harmonisation provisions of the CPD. Mandate M36Rev1 was issued in 2006, but unfortunately still made references to the EAS, and proved not to be a workable basis for the drafting of harmonised product standards.

However, work was continuing on test method standards, but it was becoming increasingly clear that it would not be concluded without additional guidance on the regulatory aspects of both testing and product approval. In 2007 the Commission asked France, Germany, The Netherlands and UK to produce proposals for regulatory guidance on test methods. These countries (who became known as the 4MS Group) produced a Report in April 2008. This covered two topics:

- Suggested regulatory guidance on some test methods
- Information on plans by the 4MS to try to develop a “Common Approach” to product assessment in their four countries to try to avoid multiple assessments and testing.

A further revision of M136 was produced in September 2008, which removed all reference to the EAS, and was much more directly related to the development work on assessment methods that was currently proceeding. CEN/BT “received” the Mandate in December 2010, stating that it could only be “accepted” when the required regulatory guidance had been received.

a) Test methods

The regulatory guidance produced by the 4MS in April 2008 was subsequently agreed by the Commission’s Expert Group and passed to CEN. Further guidance has been received following the same process. A reply from WG3 to M136Rev2, setting out the current programme of work, has recently been accepted by the Commission. The work on drafting the test method standards is now well advanced, and should be soon concluded.

b) Harmonised product standards

The CEN Product TCs expected to reply to M136Rev2 are now analysing the regulatory guidance provided by the EC on the test requirements for product approval. The work on this guidance is proceeding in the 4Ms Group that is reviewing national practice with the aim of finding a “Common Approach”.

The first feedback from the product TCs is that the regulatory is not clear and additional information will be requested.
